Project GO Kart

About the Program

Gamers Outreach Foundation constructs portable video game kiosks we like to call “GO Karts” (Gamers Outreach Karts). GO Karts are used to provide entertainment to patients in hospitals who have a limited amount of access to activities outside of their rooms.

Thanks to GO Karts, hospital staff members are able to easily transport video games and other sources of entertainment to patients who are stuck in bed or immobile for long periods of time. Long term hospitalization can often be a lonely, stressful and frightening experience. GO Karts help to ease the burdens associated with hospital stays by providing sources of relief and activities to patients.

GO Karts are constructed for use specifically within the medical environment. GO Karts are extremely durable and highly resistant to scratching. The cart can be disinfected easily with the use of simple cleaning products. The cart’s 360 degree swivel wheels and small base footprint make it ideal for movement within hospitals. GO Karts are also equipped with a lift mechanism that allows the height of the unit to be adjusted.

The fundraising goal to construct a GO Kart is $1,500.00. This includes the cost of the kiosk itself, as well as a gaming console (Xbox or PlayStation), games, controllers, and monitor. Freight shipping within the mainland U.S. is also included.
